

Precision **Splashbacks**

Australian Manufactured
Precision Splashbacks

www.precisionshowerscreens.com.au

Almost any colour is available, with the preference to match colours from the Dulux and Resene colour range.

Advantages of Splashbacks

Precision specialise in the supply and installation of coloured Glass Splashbacks for kitchens, bathrooms, laundries and feature walls. Our glass splashbacks are custom made to suit each individual request.

Glass Splashbacks are:

- Easy to clean and hygienic
- Heat resistant as all panels at Precision are toughened
- Modern, sophisticated and add a touch of elegance to any room
- Grout free
- Available from the Dulux and Resene colour range

At Precision, we pride ourselves on our prompt, reliable and friendly service and undertake to provide you with great on site professional advice and a high quality product.

Adding colour to your kitchen or bathroom is very easy with Glass Splashbacks

Glass Splashbacks are suitable to a wide range of applications thanks to the durability of the product.

Frequently Answered Questions

1

What is the difference between Starphire glass and Clear glass?

Starphire glass is the most optically transparent glass available; which means your colour choice has the least possible variation to the colour chosen. Clear glass has a high concentration of iron, so when the glass is painted it gives off a green tinge.

2

What wall or surface conditions are suitable for Glass Splashbacks?

Splashback panels can be applied to almost any surface including plaster board, gyprock, fibre board, MDF etc. The surface must be reasonably free from protrusions. E.g.: Brick walls and nails.

3

What colours are available?

Almost any colour is available, with the preference to match colours from the Dulux and Resene colour range.

4

What are the prerequisites for Check Measuring?

Your Kitchen or Bathroom needs to be completely finished. That includes bench tops, power points, range hoods, taps, cabinetry, architraves, cook tops etc. This ensures a perfect fit with minimal gaps. If the Glass Splashback is going behind a range hood, the range hood needs to be removed prior to check measuring so that the hole locations and sizes can be measured accurately. The responsibility of removing/ installing range hoods is that of the customer.

5

How do I clean my splashback?

Regular non abrasive glass cleaning products are applicable.

6

When is fire rated board required?

Fire rated board is required when the edge of the gas burner is within 140mm of the Glass Splashback. This is a Gas Safe Law.

Glass Splashbacks are Measured, Manufactured and Installed by our experienced team
